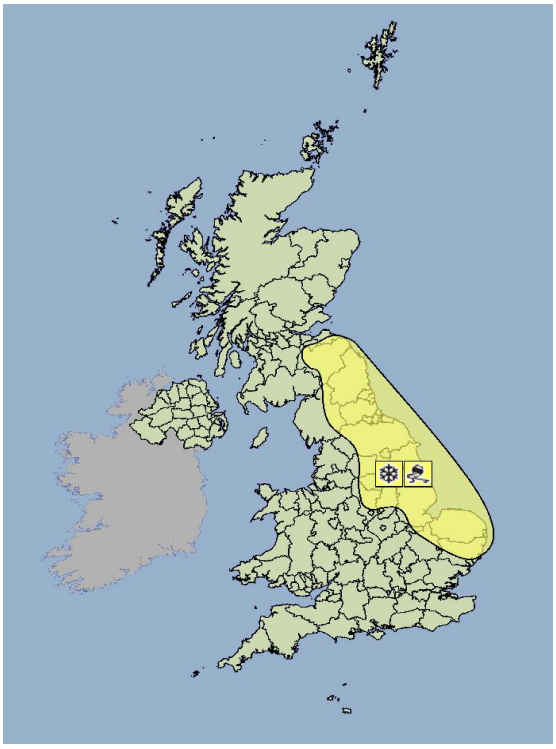
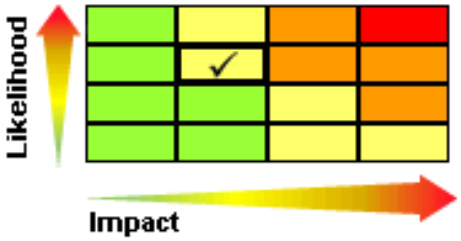
National Severe Weather Warning Service





Chief Forecasters Assessment
Rain will increasingly turn to hill snow above around 200 metres during late Friday afternoon and evening. By the end of Friday evening, 2-5 cm of snow may accumulate on high ground above 200 metres. Some snow is likely even to low levels by late Friday evening with a very patchy 1-2 cm possible in places. There is some uncertainty in how quickly rain will turn to snow across the south of this area, with a small chance that these parts may only see rain starting to turn to snow during the early hours of Saturday.

The Met Office have issued a **Yellow Warning** of **Snow and Ice**

Valid from **15:00 on Fri, 16th Mar 2018** until **23:55 on Fri, 16th Mar 2018**

A band of rain and hill snow will increasingly turn to snow through late Friday afternoon and evening. As this band moves south-westwards, ice will form in places where skies clear.

Some roads and railways are likely to be affected with longer journey times by road, bus and train services. Icy patches are likely on untreated roads, pavements and cycle paths.

This warning has been updated to focus purely on Friday. A separate warning has been issued to cater for snow on this band through Saturday morning and snow showers following thereafter.
